DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of figures 4-12, claims 1-7 and 10-12 in Paper No. 6 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 and 10-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Park [U.S. Pat. 5,774,327].

Park (figures 6-10, cols. 4-6) discloses an integrated circuit ferroelectric memory device, comprising:

an integrated circuit transistor (23);

a ferroelectric capacitor on the integrated circuit transistor, the ferroelectric capacitor having a first electrode (32A) adjacent the transistor, a second electrode (34A) remote from the transistor and a ferroelectric film (33A) therebetween; and

a plate line (44A) directly on the ferroelectric capacitor.

With respect to claim 2, Park discloses that the plate line is directly on the second electrode of the ferroelectric capacitor (see fig. 10).

With respect to claim 3, Park discloses that the integrated circuit ferroelectric memory device is free of a plug between the plate line and the second electrode (see fig. 10).

With respect to claim 4, Park discloses that the integrated circuit ferroelectric memory device is free of an insulating layer between the plate line and the second electrode (see fig. 10).

With respect to claim 5, Park discloses that the second electrode has a width and wherein the plate line is directly on the second electrode across the width (see fig. 10).

With respect to claim 10, Park discloses that the first electrode comprises at least one of platinum and iridium dioxide (col. 5, lines 33-36).

With respect to claim 11, Park discloses that the ferroelectric film comprises at least one of PZT (col. 5, lines 36-37).

With respect to claim 12, Park discloses that the second electrode comprises at least one of iridium, ruthenium, platinum and iridium dioxide (col. 5, lines 37-39).

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

5. Claims 1-3, 5-7 and 10-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Jung et al. [U.S. Pat. 6,388,281].

Jung (figures 2-3H, cols. 5-9) discloses an integrated circuit ferroelectric memory device, comprising:

an integrated circuit transistor (104);

a ferroelectric capacitor on the integrated circuit transistor, the ferroelectric capacitor having a first electrode (120,122) adjacent the transistor, a second electrode (126, 128) remote from the transistor and a ferroelectric film (124) therebetween; and a plate line (140) directly on the ferroelectric capacitor.

With respect to claim 2, Jung discloses that the plate line is directly on the second electrode of the ferroelectric capacitor (see fig. 2).

With respect to claim 3, Jung discloses that the integrated circuit ferroelectric memory device is free of a plug between the plate line and the second electrode (see fig. 2).

With respect to claim 5, Jung discloses that the second electrode has a width and wherein the plate line is directly on the second electrode across the width (see fig. 2).

With respect to claim 6, Jung discloses that a stripe line (136) adjacent the second electrode and remote from the first electrode (see fig. 3H, col. 8, lines 35-36).

With respect to claim 7, Jung discloses that the stripe line comprises aluminum (see col. 8, lines 44-54).

With respect to claim 10, Jung discloses that the first electrode comprises at least one of platinum and iridium dioxide (col. 7, lines 1-5).

With respect to claim 11, Jung discloses that the ferroelectric film comprises at least one of PZT (col. 7, lines 18-22).

With respect to claim 12, Jung discloses that the second electrode comprises at least one of iridium, ruthenium, platinum and iridium dioxide (col. 7, lines 31-40).
